

Product 1:

Basic

using the Data Cleaner Project from ML2. Create a Streamlit UI which allows the user to upload a CSV File (my_data.csv) and the system will clean it and give two outputs:

1. Cleaned CSV File
2. Report Data Profile as HTML file

Advanced Extension:

- The configuration of the application (drop_na, drop_duplicates, drop certain column/rows, etc.) should be on the Streamlit UI in form of (checkboxes, textboxes, etc.)

Technical Aspects

- The best coding style as possible
- NO over-engineering
- the best file structure
 - virtual env
 - requirements.txt
 - .env
 - README.md
 - License
 - .gitignore
 - etc.
- Logging
- Doc Strings

Development Steps

1. Start with the basics -> Running System
2. Then Optimize the code and the structure

Delivery

1. Zip on eCampus with the content of the Project --> Abgaben -> 01_DC2.0
2. [Optional] GitHub Repo Push on your OWN Repo and not the Official Repo
